Professional Services
COVID-19 Requirements

Summary of March 19, 2021 changes:

- Added Phase 3 occupancy requirements.

Prior to recommencing on-site services, all professional service providers and employer-owners are required to develop at each establishment, a comprehensive COVID-19 exposure control, mitigation, and recovery plan which must be adhered to. A site-specific COVID-19 monitor shall be designated at each location to monitor the health of individuals and enforce the COVID-19 job site safety plan. A copy of the plan must be available at all locations and available for inspection by state and local authorities. Failure to meet this requirement may result in sanctions up to, and including, license suspension.

Covered Professions and Facilities

A professional service provider is typically office-based and (a) provides services to a client, such as accountants, architects, attorneys, engineers, financial advisors, information technologists, insurance agents, tax preparers, appraisers, home inspectors, and others; or (b) serves as the office-based setting for other business functions. These employer-owners may contract with employee-service providers to provide these professional services. Providers must be able to comply with the following guidelines before re-opening, and the off-site guidance when working anywhere other than a professional services establishment.

All professional service providers and employer-owners must adopt a written procedure that is at least as strict as the requirements in this document and that complies with the appropriate safety and health requirements and guidelines established by the Washington State Department of Labor & Industries and the Washington State Department of Health.

Professional service provider employer-owners facility-specific requirements:

1. Professional Services are required to mandate that employees work from home when possible and close offices to the public if possible.

2. In Phase 1 and 2 occupancy is 25% of fire marshal capacity or 200 people (whichever is fewer) if six feet of physical distance can be maintained. In Phase 3 occupancy is 50% of fire marshal capacity or 400 people (whichever is fewer) if six feet of physical distance can be maintained. There is an exception of one to one service in an enclosed room.

3. Arrange contactless or electronic scheduling, pay options, and services wherever possible.

4. Develop at each location, a comprehensive COVID-19 exposure control, mitigation, and recovery plan. The plan must include policies regarding the following control measures: PPE utilization; on-location physical distancing; hygiene; sanitation; symptom monitoring; incident reporting; location disinfection procedures; COVID-19 safety training; exposure response procedures and a post-exposure incident project-wide recovery plan.

5. Provide soap and running water at all business locations for frequent handwashing. Professional employee-service providers should be encouraged to leave their workstations to wash their hands regularly, before and after going to the bathroom, before and after eating, and after...
coughing, sneezing or blowing their nose. Alcohol-based hand sanitizers that contain more than 60% ethanol or 70% isopropanol can also be used, but are not a replacement for the water requirement. Do NOT use methanol based sanitizers.

6. Post required hygienic practices in areas visible to all workers, which include:
   - Not touching the face with unwashed hands or with gloves;
   - Washing hands often with soap and water for at least 20 seconds;
   - Using hand sanitizer with at least 60% ethanol alcohol or 70% isopropanol;
   - Cleaning and disinfecting frequently-touched objects and surfaces such as workstations, keyboards, telephones, handrails, machines, shared tools, elevator control buttons, doors and doorknobs; and
   - Covering the mouth and nose when coughing or sneezing as well as other hygienic recommendations by the U.S. Centers for Disease Control (CDC).

7. Provide disinfectants to professional employee-service providers throughout the workplace, and ensure cleaning supplies are frequently replenished.

8. Clean and disinfect frequently touched surfaces after each use, including reception areas, personal work stations, chairs, headrests and armrests, hand tools, other equipment, handrails, restrooms and breakrooms, and pens/pencils.

9. Adhere to social distancing requirements as outlined in this document. Professional employee-service providers should maintain six feet of space between desks/stations or have physical barriers between them when in use.

10. Increase ventilation rates where feasible. Evaluate ventilation and utilize U.V. filters with a higher MERV rating.

11. Ensure that tissues and trash cans are placed throughout the business.

12. Advise clients of new requirements when making professional service appointments:
   - Clients must self-screen for signs and symptoms of COVID-19 before arriving at the service provider location.
   - Clients must wear a cloth face covering when at the service provider location.
   - Clients should not bring other guests with them, unless they are bringing children who must be supervised.
   - Clients should advise professional employee-service providers via call, email, or text message that they have arrived at the location for the appointment, and are waiting for instructions to enter.

13. Post a notice at the front door or window regarding access to the facility for walk-in appointments at professional service provider establishments. Employer-owners should include the phone number that the guest should call to determine availability of services. If service is available at the time, the walk-up guest will need to answer questions regarding COVID-19 exposure and current health, and put on a face covering before entering the location.

14. For off-site services, professional employee-service providers and clients must wear the appropriate PPE and work one-on-one with clients. PPE should be disposed of or sanitized where
appropriate per the guidance above, such as disposing of disposable gloves after providing service for a client. Professional employee-service providers must adhere to social distancing requirements, maintaining at least six feet of distance from individuals who may be present at the off-site location.

**COVID-19 Training**

15. Train all on-site professional employee-service providers on the worksite’s policies, the requirements in this document, and all COVID-19 appropriate safety-related requirements and guidance in the language they understand best.

**Health/Symptoms for Professional Service Provider Employer-Owners and Professional Employee-Service Providers**

16. Create a policy that requires professional employee-service providers to stay home or leave the worksite when feeling sick or when they have been in close contact with a confirmed positive case of COVID-19. If they develop symptoms of acute respiratory illness, they should seek medical attention and inform their employer.

17. Screen all professional employee-service providers at the beginning of their day by asking them if they have a fever, cough, shortness of breath, fatigue, muscle aches or new loss of taste or smell. If a professional employee-service provider has a family member with COVID-19, that individual must follow the isolation/quarantine requirements as established by the Department of Health. If a professional employee-service provider is confirmed to have COVID-19, employers or the individual should inform fellow workers of their possible exposure in the workplace, but maintain confidentiality as required by the Americans with Disabilities Act (ADA). The employer or individual should consult with the local health department and/or instruct fellow workers about how to proceed based on the CDC Public Health Recommendations for Community-Related Exposure.

18. Instruct professional employee-service providers to report to their supervisor or employer if they develop symptoms of COVID-19 (e.g., fever, cough, shortness of breath, fatigue, muscle aches, or new loss of taste or smell). If symptoms develop during a shift, the worker should be immediately sent home. If symptoms develop while the professional employee-service provider is not working, they should not return to work until they have been evaluated by a healthcare provider.

19. If a professional employee-service provider or client reports feeling sick and goes home, the area previously occupied by that person should be disinfected in accordance with CDC and Department of Health guidelines.

All professional service provider employer-owners must meet and maintain all the requirements in this document, including providing materials, schedules and equipment required to comply.

**Safety and Health Requirements**

All professional service providers and employer-owners have a general obligation to maintain a safe and healthy workplace in accordance with state and federal law and safety and health rules for a variety of workplace hazards. Employers must specifically ensure operations follow the main Labor & Industries COVID-19 requirements to protect workers. COVID-19 workplace and safety requirements can be found here.
